

## Instrument Housing Rail Mount 831ST-BALL-125

### Parts included:

Two piece ball mount, cap and threaded section.

Hollow mounting bolt

One 1 1/4" to 1" bushing

One 1 1/4" to 1 1/8" bushing

Two 1/4-20 allen head screws

Two large rubber washers

One large plastic washer

1. Position the appropriate bushing (if required) on the rail in the location for your instrument housing. Clamp the ball mount on the bushing. Using a punch, mark the rail location for the wiring hole. Drill a hole for the wiring.

2. Drill a 1 1/8" hole using a hole saw in the instrument housing.

3. Install bushing (if required) on the rail. Clamp the ball onto the rail. Using the hard plastic washer on the inside of the housing and a rubber washer on the outside use the hollow mounting bolt to fasten the housing to the ball.
